Let's Start!

Stay healthy through diet and sleep!

Learning Outcome

Exchange advice and suggestions in communicative situations.

Ask your partner:

- Do you like spicy food? Why or why not?
- What happens if you eat spicy food?
- What happens if you eat a large meal before going to bed?

Can Do Statements

- I can talk about staying healthy.
- I can discuss how to deal with problems.
- I can talk about cause and effect.

Let's Explore!

Sally writes an article for *Cambridge Life* on the connection between food and sleep.

Instructions: Read the text aloud.

If you can't sleep, you might want to look at your diet. Research has shown that what and when people eat can be connected to how well they sleep. If you eat a big meal an hour before going to bed, you probably won't sleep well. The chances of not sleeping are even greater if your meal is more spicy or fatty than usual.

Another reason that people don't sleep is because they don't eat enough. If you're on a diet, you may have trouble going to sleep. Experts suggest that if you have trouble sleeping, you could try keeping a regular eating schedule during the day and having a light snack at night. Alcohol and caffeine can also affect your sleep. If you drink alcohol before you go to sleep, you may fall asleep quickly, but you'll probably sleep lightly. There's also a chance that you'll wake up in the middle of the night. If you have more caffeine late in the day, your sleep will most probably be affected. You should avoid drinking too many caffeinated beverages.

Let's Practice!

What did Sally talk about in her article?

Instructions: Read the article again. Complete the sentences with fatty, diet, schedule, spicy, alcohol, caffeinated.

1. If you're on a _____, you may have trouble going to sleep.
2. The chances of not sleeping are even greater if your meal is more _____ or _____ than usual.
3. You could try keeping a regular eating _____.
4. You should avoid drinking too many _____ beverages.
5. If you drink _____ before you go to sleep, you may fall asleep quickly.

Let's Practice!

What will happen in this condition?

Instructions: Read the sentences. Match the two parts of the sentences from Column A to Column B.

COLUMN A

COLUMN B

- | | |
|---|--|
| 1. If you eat a big meal an hour before going to bed, | a. you might want to look at your diet. |
| 2. If you can't sleep, | b. you probably won't sleep well. |
| 3. If you're on a diet, | c. the chances of not sleeping are even greater. |
| 4. If your meal is more spicy or fatty than usual, | d. you may have trouble going to sleep. |

Extension Activity

Make a list of ways you and your partner can improve your sleep.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- With a partner, make a list of things that negatively (in a bad way) affect your ability to sleep.
- Make a list of things that improve your ability to sleep.
- Go online to add new ideas to your lists.
- Give each other suggestions about how to improve sleep. You can talk about anything connected to diet or lifestyle. Try to use conditional sentences (*If...*).

Self-Assessment

Yes

No

I talk about health by discussing things that affect sleep.

☐ ☐

I research other ideas to improve sleep.

☐ ☐

I give suggestions using conditional sentences.

☐ ☐

I listen to suggestions.

☐ ☐

Target Words

- **to be connected** (expression): to be associated with; to change according to something else
e.g. Research has shown that what and when people eat can be connected to how well they sleep.
- **diet** (noun): what you eat
e.g. If you can't sleep, experts suggest that you look at your diet.
- **spicy** (adjective): hot to taste; with lots of spice
e.g. If your meal is spicy, the chances of not sleeping are even greater.
- **fatty** (adjective): containing a lot of fat (in food)
e.g. Eating fatty food may make sleeping more difficult.
- **schedule** (noun): the time when something is supposed to happen
e.g. You could try keeping a regular eating schedule during the day.
- **caffeinated** (adjective): containing caffeine, like coffee, tea or soda
e.g. You should avoid drinking too many caffeinated drinks.
- **alcohol** (noun): Fermented drinks such as beer, wine, vodka, etc.
e.g. Alcohol and caffeine can also affect your sleep.
- **beverage** (noun): drink
e.g. You should avoid drinking too many caffeinated beverages.

Learning Points

Discussing How to Deal with Problems

To discuss how to deal with problems such as health issues, you can use modals like *might*, *could*, or *should*.

These are very polite structures.

The modal is followed by a verb in the base form. You do not use "to".

These modals can go at the beginning of the sentence, or after a clause starting with "If ...".

Examples:

- *If you can't sleep, you might want to look at your diet.*
- *You could try keeping a regular eating schedule during the day and having a light snack at night.*
- *You should avoid drinking too many caffeinated drinks.*

Learning Points

The First Conditional

You use the first conditional to talk about real possibilities in the future.

You use the first conditional to say it's possible that you will do something. In that condition, something else may or will (not) happen.

The parts of the sentence are divided into two clauses: the *If* clause and the *result* clause.

When the *if* clause goes before the *result* clause, you separate the clauses with a comma.

The *result* clause can also go before the *if* clause. In this case, you do not use a comma.

1st Clause	2nd Clause	Meaning
If you can't sleep,	you might want to look at your diet.	It's possible you can't sleep. In this condition: you might want to look at your diet.
If you eat a big meal an hour before going to bed,	you probably won't sleep well.	It's possible you will eat a big meal. In this condition: you probably won't sleep well.
The chances of not sleeping are even greater	if your meal is more spicy or fatty than usual.	It's possible your meal is more spicy or fatty than usual. In this condition: the chances of not sleeping are even greater.

Examples:

- *If you can't sleep, you might want to look at your diet.*
- *If you eat a big meal an hour before going to bed, you probably won't sleep well.*
- *The chances of not sleeping are even greater if your meal is more spicy or fatty than usual.*
