Let's Start!

I see what you mean. I hear you!

Learning Outcome

Exchange advice and suggestions in communicative situations.

Ask your partner:

- Can you name the 5 senses?
- Which sense do you use the most?
The least?

Can Do Statements

- I can talk about behavior and personality.
- I can speculate about feelings and impressions.
- I can discuss how to deal with problems.

Let's Explore!

In this article, Sally writes about how people get information through their **senses***.

* The "senses" are: sight, hearing, touch, taste and smell.

Instructions: Read the text aloud.

Have you ever wondered why it is that people look up when they are thinking? Psychologists must find this issue very intriguing, because many studies have been done on the subject. Most people relate to their surroundings through one main sense – usually sight, hearing, or touch. The other senses are smell and taste. The words that people choose can provide a hint as to which sense they relate to. For instance, a visually-oriented person might say, "I see what you mean," whereas a hearing-oriented person might very well say, "I hear what you're saying." This choice of words can't be just a coincidence.

When a person is trying to find an answer, he or she will use one of the three main senses to find the solution. If you ask a person to remember an address, he might try to picture the house and street. A different person may try to remember the sound of the spoken address if you ask the same question. Psychologists can detect through eye movements which sense a person is using before the person even says anything.

Let's Practice!

In her article, Sally talks about the 5 senses. Can you identify them all?

Instructions: Match the senses with their corresponding definition from Column A to Column B. Practice saying the sentence(s) aloud with a partner. Correct each other.

COLUMN A

1. Sight
2. Hearing
3. Touch
4. Smell
5. Taste

COLUMN B

- a. The ability to obtain information from your fingers.
- b. The ability to get information from your nose.
- c. The ability to see your surrounding environment.
- d. The ability to get information about something you eat and drink.
- e. The ability to interpret sounds.

Let's Practice!

Sally speculates about her article and the topic of senses.

Instructions: Read the sentences. Write the missing information in each sentence. Use the information from the box below. Practice saying the sentence(s) aloud with a partner. Correct each other.

It can't just be / must use all / must find this issue
People can't just / Many people must have

1. Psychologists _____ very intriguing, because many studies have been done on the subject.
2. Everyone _____ of their senses to some degree.
3. _____ rely on one sense at a time.
4. _____ a coincidence when people say "I see" or "I hear you".
5. I got a lot of reaction on this article. _____ enjoyed reading it.

Extension Activity

Do a survey about human senses.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Talk to 10 people. Explain the 5 senses.
- Ask each person to identify which sense they use the most.
- Discuss why the person thinks this is the case.
- Compile the results of the survey.
- Design a graph, such as a bar graph, to show your results.
- Present your graph.

Self-Assessment

Yes No

I talk to 10 people about behavior and personality (human senses).

☐ ☐

I ask questions about senses.

☐ ☐

I design a graph to show the survey results.

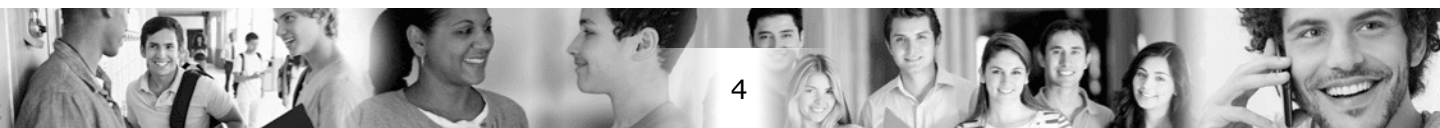

☐ ☐

I present the survey.

☐ ☐

Target Words

- intriguing** (adjective): makes you interested or curious
e.g. Psychologists have found this issue so intriguing that many studies have been done on the subject.
- sense** (noun): means by which you obtain information about your environment (sight, hearing, touch, etc.)
e.g. Most people relate to their surroundings through one main sense.
- hearing** (noun): ability to detect and understand sounds
e.g. The main senses are sight, hearing and touch.
- touch** (noun): the ability to get information by placing your fingers on something
e.g. You can get a lot of information through touch.
- sight** (noun): the ability to see things in your environment
e.g. Not everyone relies on their sense of sight. Some people prefer to use their sense of hearing.
- to picture** (verb): to imagine
e.g. To remember an address, a person might try to picture the house and street.
- sound** (noun): a vibration that a person can detect and interpret
e.g. A hearing-oriented person tries to remember the sound of the spoken address.
- smell** (noun): the ability to get information about your environment from your nose
e.g. The other senses are smell and taste.
- surroundings** (noun): your immediate environment
e.g. Most people relate to their surroundings through one main sense.

Learning Points

Speculating about Feelings and Impressions

When you speculate about something, you are making a guess based on what you know about the situation.

You can show you are speculating about something by using a modal, like *must* or *can't*. The modal is followed by a verb.

The verb can be in the Present tense or the Present Perfect tense.

Examples:

- *Psychologists must find this issue very intriguing, because many studies have been done on the subject.*
- *This can't be just a coincidence.*

Learning Points

Conditional Sentences

You use the First Conditional to say it's possible that you will do something. In that condition, something else may or will (not) happen.

The sentence is divided into two clauses: the *if* clause and the *condition* clause.

The **if** clause can go at the start or the end of the sentence. The **if** clause is in the **Present Tense**. The condition clause is in the *future* with **will** or with the modal verbs **might**, or **may** + the base form or the verb (the infinitive without 'to').

1st Clause	2nd Clause	Meaning
If you ask two people to remember an address,	a person might try to picture the house and street.	It's possible you ask two people to remember an address. In this condition: a person might try to picture the house and street.
A different person may try to remember the sound of the spoken address	if you ask the same question.	It's possible you ask the question to somebody else. In this condition: a different person may try to remember the sound of the spoken address.

Examples:

- *If you ask two people to remember an address, a person might try to picture the house and street.*
- *A different person may try to remember the sound of the spoken address if you ask the same question.*
